## Ease of ordering & integrated stock management: barcode scanning

Tradcom is more than an online web shop. Using Tradcom, it is easy to set up an **individual order and stock management system tailored to your requirements.**

### Barcode labels

You can very easily and efficiently generate barcode labels for all articles managed via Tradcom. These labels can be produced by the various users at your company, each in accordance with his specific requirements (On warehouse bins, besides them in the office, on the relevant machine or by the relevant stock, etc).

### Tradcom order management

We have developed the facility to **place your orders** quickly, easily and correctly by means of **barcode scanning**, with a choice of 2 types of scanner. This is done using barcodes in your warehouse, on the product packaging, in the paper catalogues of participating manufacturers, etc.

This helps to increase efficiency and effectiveness in any environment.

### Tradcom stock management

Besides its ordering function, the **Tradcom Pro-Scan** scanner also offers pre-programmed scenarios for recording goods inwards and issues and for stocktaking. The combination of this scanner with the **Tradcom stock management module** provides your organisation with a fully automated management system. With this module you can add articles yourself, set stock parameters, update issues of articles and do an MRP run.

**Quick, easy and less chance of errors!**  
**Make pen and paper obsolete!**

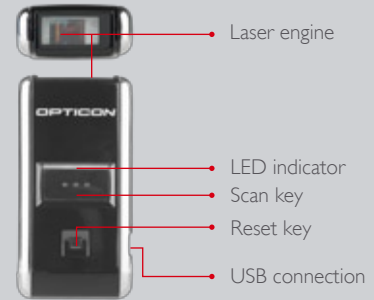

## Tradcom barcode scanners

Tradcom supplies 2 types of barcode scanner.

### **Simply smarter ordering!**

Administrative and logistics costs often have a big effect on the total cost of indirect materials.

Many companies have major issues based around cumbersome ordering and settlement procedures with vast amounts of written communication, long lead times and many administration operations that are high in resource cost.

Are you looking for a simple purchasing procedure that will simplify your logistical and administrative processes?  
Don't hesitate; take advantage of the benefits & savings Tradcom can deliver today!

### **Only a mouse click away from around 500,000 MRO items!**

Whether your a large plc or small firm, purchasing manager, production director, Engineer or Inventory manager, with Tradcom everyone can have access to the complete, carefully compiled catalogues of the participating industrial suppliers, any time, anywhere.  
What is more, you'll find all the up-to-date information you really need (stock, net prices, technical details, ...) and you can place orders quickly and easily.

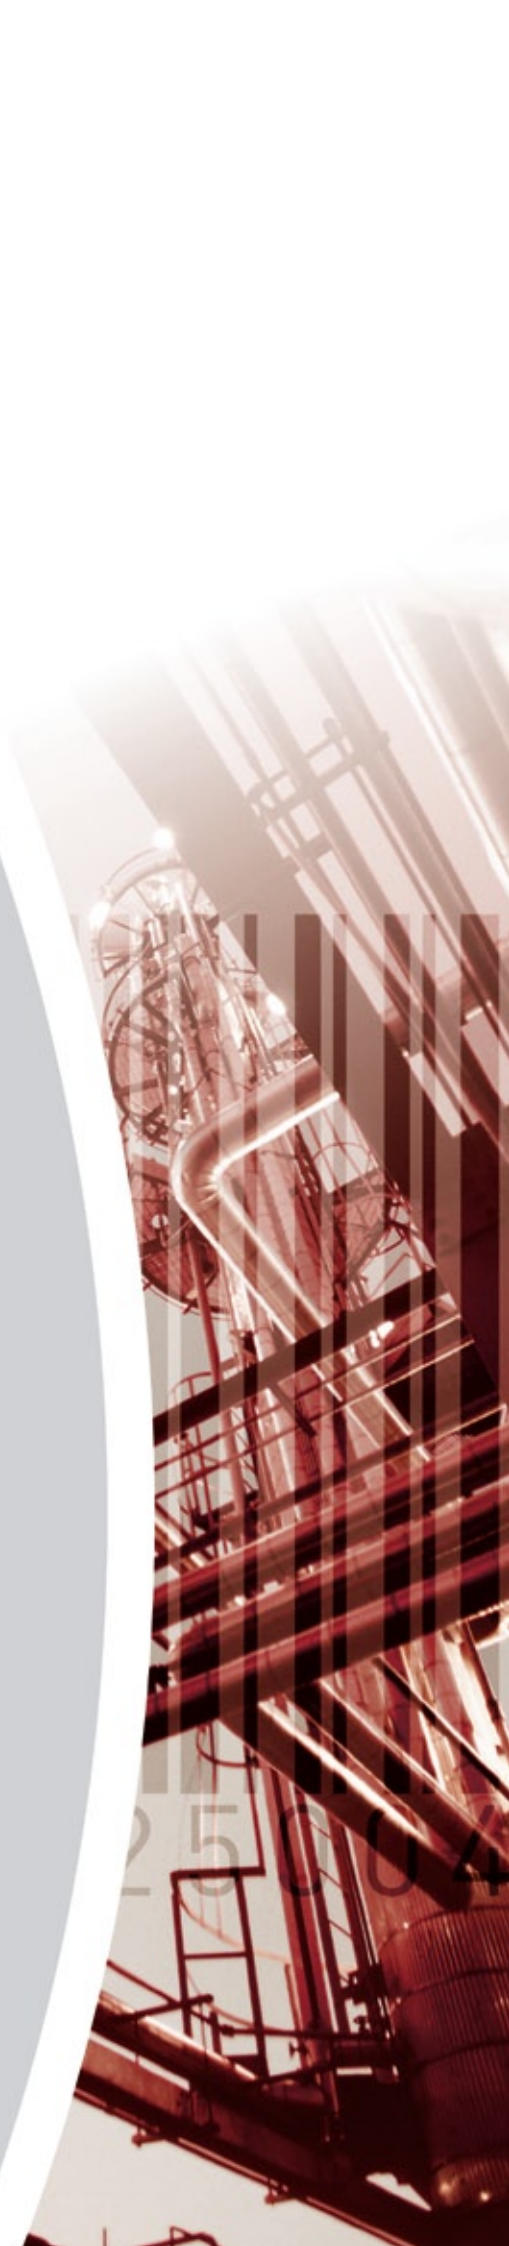

- Fast**
- Efficient**
- Up-to-date & complete**

### **Ease of use comes first!**

Tradcom and the selected participating supply partners are continually working and investing to ensure the system develops in line with customer requirements and new innovations , thus remaining alert and at the cutting edge of your and industry requirements and needs.

**With Tradcom you have access to around 500,000 items.

Can be fully integrated with your own purchasing system

Integrated barcode scanning software

In just a few seconds you can see for yourself the details that you would otherwise have to ask for by phone, fax, e-mail ...

Free, no subscription, 24/7

tradcom

### **Can be integrated with any ordering environment**

Since 2001 Tradcom has grown into a very successful multi-country portal for indirect materials. This success results from its combination of a very wide range of products with **flexible communication** facilities for various ordering and ERP systems ensuring a seamless information flow .

Tradcom has developed **standard links** for various purchasing packages such as SAP SRM, Ariba, Oracle iProcurement, Hubwoo, etc.

These links support the **PunchOut** principle in accordance with the **OCI** and **cXML** standard.

Using the same technology as a base, Tradcom **also offers opportunities for integration with smaller packages.**

Orders generated in your own purchasing system can then be sent electronically via the **Tradcom communication platform** using the most widely accepted formats (EDI, XML) and communication protocols.

In other words, Tradcom's online catalogues can be linked to any ERP system, **so that any business can significantly cut down greatly on the number of administrative transactions.**

Extensive budgeting and authorisation functions allow users to safeguard their budget, while you remain in control as an administrator.

The system lets every customer arrange the purchasing process to suit his individual business requirements.
